No code?
No problem.

PowerPathway

Power Platform and All Things Azure

Power Platform and all things Azure

Duration: 2 Days
Delivery Style: Live instructor led session. Hands on guided labs
Audience: Non-technical individuals with an interest in PP development
Technical level: Semi-technical

Objectives

By the end of this course you will fully understand the building blocks behind Microsoft's Azure platform. You will be able to implement security and know where to go to set policies to control compliance.

Short Overview

It is important that anybody interested in developing bespoke software has a broad understanding of the current Microsoft platforms that are available. Specifically, the relationship between Azure and the Power Platform. Citizen developers also need an introduction to such concepts as security and software lifecycle i.e., deployment patching etc.

Course Details

Day 1

- What is Azure?
- What is Dynamics?
- What is O365?
- What is the Power Platform?
- Azure Admin (Citizen View)
- User and Group Management
- Identity Sync
- Security in 365
- Data Loss Prevention
- Compliance
- The Risk from Within
- Discover Threats

Day 2

- Looking for Solvable Problems
- Identifying Problems that are Beyond Citizen Development
- Build a Business Case
- Identify Detailed User Requirements
- Development Management
- Workshop Lab
- Problem Resolution Statement (is this Suitable for Citizen Development?)
- Create a Technical Architecture Document (TAD)
